# Web Development
## Offshoring

**Looking for a reliable partner for extra IT capacity? We are definitely your answer!**

**Working with an experienced team of Europeans and Vietnamese natives, we can offer what you expect: western quality and communication standards and affordable rates.**

## what you can expect

Sunbytes aims at delivering **high western quality standards** offshoring capacity for a completely new experience among many poor quality outsourcing providers. To make this happen, we have 1 western team member on each 3-4 Vietnamese team members. Most of these European team members are project managers or lead developers.

So if you are an internet company or advertising agency who wishes to build up **your own offshoring team in Asia**, then Sunbytes is definitely the right solution for you.

## what we offer

Sunbytes offers a flexible solution for companies who need **extra and reliable IT capacity**. We always have the best experienced candidates for:

- Front-end development (HTML/CSS/Javascript)
- Back-end development (PHP)
- Software testing
- Project management

With our offshoring service - starting from 6 months and one developer - you can totally set up your own effective team in Vietnam. When you wish to set up a team, we can together start **defining the functional profiles**. After that, Sunbytes will **recruit fitting candidates** from whom you can choose.

*"We really enjoy working with Sunbytes for our front-end web solutions. They have a flexible team with dedicated employees. This results in: short communication lines, high quality work and deadlines met. Together with their cost-efficient price model, Sunbytes makes a great offshore partner for us - with whom we hope to expand our businesses these years."*

Mark van Heusden, Concepten Carrousel B.V.
